3

Recording

●AUTOMATIC RECORDING SETTING

1. Press [MENU] on the remote control, and use the direction buttons to select <RECORD SETUP> and press [ENTER]. Alternatively, you can select <MENU> - <RECORD SETUP> from the status bar.
2. Set <RECORD SETUP MODE> to <AUTO CONFIGURATION>.
3. Select "Automatic Record Configuration Mode".

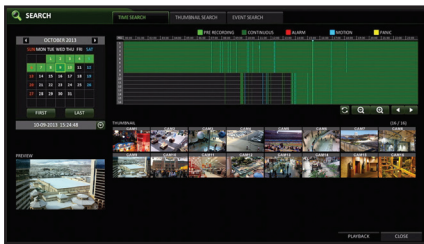

- ALWAYS HIGH VIDEO QUALITY : Recording will proceed in the best quality regardless of the event at all times. As this option will always make recording in the best quality, the recording period is the shortest compared to the other record modes.
- MOTION RECORD : Recording will proceed only if a motion is detected.
- INTENSIVE ALARM RECORD : Recording will be performed in a low quality. However, the quality will switch to high if an alarm event occurs.
- INTENSIVE MOTION/ALARM RECORD : Recording will be performed in a low quality. However, the quality will switch to high if an alarm event occurs or motion is detected.

- ALARM RECORD : Recording will proceed only if an alarm event occurs.
 - MOTION/ALARM RECORD : Recording will proceed only if a motion is detected or an alarm event occurs.
 - INTENSIVE MOTION RECORD : Recording will be performed in a low quality. However, the quality will switch to high if motion event is detected.
 - INTENSIVE ALARM RECORD : Recording will be performed in a low quality. However, the quality will switch to high if an alarm event occurs.
 - INTENSIVE MOTION/ALARM RECORD : Recording will be performed in a low quality. However, the quality will switch to high if an alarm event occurs or motion is detected.
4. Click <APPLY>.

4

Search

●TIME SEARCH

1. From the <SEARCH> menu, select <TIME SEARCH>.
2. Specify the search date and time from the calendar in the left corner of the screen.
3. You can identify the type of the recording data by the color in the bar.

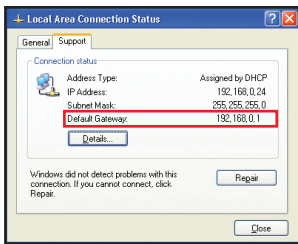

- Yellow Green (PRE RECORDING) : The pre-recording is performed on the recording data after you set the <PRE RECORDING TIME> from <OPERATION MODE>.
- Green (Continuous) : The continuous recording is performed on the recording data.

- Red (Alarm) : The alarm event recording is performed on the recording data.
 - Blue (Motion) : The motion event recording is performed on the recording data.
 - Yellow (Panic) : The panic manual recording is performed on the recording data.
4. Click to move to a desired start time in the time bar, or use the buttons at the bottom of the status bar to make search.
 5. Select an item to play and click <PLAY>. Click to move to a desired time, or simply double-click a desired time in the time bar to play the video data on that time.
- For details on thumbnail search and event search, refer to the user manual.

5

Network Setting

●NETWORK CONNECTION SETTING

1. Connect the DVR to the router.
2. Connect the [WAN/UPLINK] port of the router directly to the fixed IP LAN cable, or connect it to the ADSL modem.
3. When done, configure the port forwarding for the RTSP and Web Service ports by clicking Port Forwarding.
4. Click <PORT FORWARDING> for each. You will see the confirmation message. Click <APPLY> and exit the menu.
5. The network settings of the DVR are complete.

Note: Some router models may not support UPNP. If you see a failure message after clicking <PORT FORWARDING>, refer to the user manual of the router and configure the port forwarding settings manually.

TO CONFIGURE THE NETWORK SETTINGS

1. From the main menu of the DVR, move to <SYSTEM SETUP> - <NETWORK> - <IP SETUP>.
 2. Use DHCP to get an IP address from the router, or manually enter an IP address that falls within the private IP range provided by the router.
- IP ADDRESS : 192.168.0.123 (enter the network IP address.)

5. When the network configuration is complete, proceed with the DDNS settings. From the main menu of the DVR, move to <SYSTEM SETUP> - <NETWORK> - <DDNS>.
6. Rename the DVR. (The default name of the DVR is the MAC address of the DVR.) Enter a desired DVR name (combination of characters and numbers).

- GATEWAY : 192.168.0.1 (enter the gateway address.)
 - SUBNET MASK : 255.255.255.0 (type the subnet mask.)
 - 1ST, 2ND DNS SERVER : 168.126.63.1 (enter the address of a DNS server.)
7. When done, click <DDNS REGISTRATION TEST> and <DDNS CONNECTION TEST> in this order. If you receive a success message. Check the DVR address and click <APPLY> at the bottom.
 8. Check the DVR address and the Web service port in the network settings to make sure that any Internet-connected PC can access the DVR.
 9. If you type "mydvr" for the DVR name from the DDN item, the address of the Web viewer is "http://mydvr.dvrlink.net: 8080".

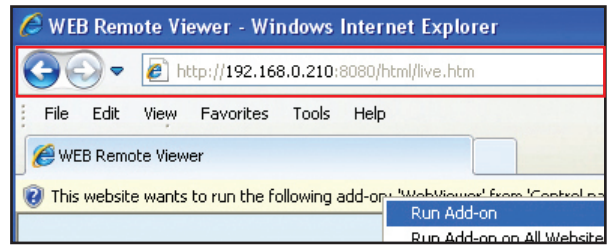

5

Network Setting

● NETWORK CONNECTION

● ACCESSING WITH THE BROWSER

1. Open the browser and enter the IP address of the DVR, or enter the URL address in the address bar.
 ex) If using the DDNS: `http://00115f123456.dvrlink.net:8080`
 If using an IP address: `http://192.168.0.210:8080`
 For more information about the router and network settings, refer to the user manual of the respective product.

2. When the login dialog appears, enter the user name and password. The default ID and password
 - User name : ADMIN
 - Password : 1234
 NOTE: The Username and Password are case sensitive.

3. Click the upper warning bar to install the ActiveX before enabling the add-in function.
4. When the security warning window appears, click <Install>.

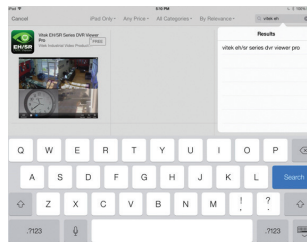

5. When the ActiveX is installed completely, you will see the live screen.
 For more information about using the Web viewer, refer to the user manual.
